Sail Selection

Requirements & Required Sails

Trysail hoisting

- Mainsail is fully lowered and secured to the boom. Set the sail on a separate external track.
- Set the sail on the mast using a luff rope.
- Some tracks that use cars have a slot that can accommodate a luff rope.
- If the mainsail is on cars, remove the top 5 to 7 cars and attach them to the trysail.
- Add floating cars below the head carriage that can be attached to the trysail, making the change quicker.
- Attach a low stretch rope to the upper spreaders that can be tensioned from the deck. Hank or lash the trysail to this rope and hoist.

Things to keep in mind

- Trysail and jib sheets attached to clew
- Alternate means of attachment is needed for the storm jib too
- New Storm sails must be orange. Older sails need to have orange stripes added
- Practice hoisting with foulies and harnesses hooked in.
